Forward Deployed Engineer | AI Engineer | 5× Hackathon Winner | Available January 2027

EXPERIENCE

Sherlock AI | Software Engineering Intern Remote · Jun 2026 - Aug 2026

- Owned the public demo interview flow end to end in Next.js (adaptive interview behavior, in-browser recording, submission): the surface prospective customers evaluate before they talk to the team.
- Prototyped a Google Meet add-on that shows audit logs and checks interview integrity from a sidebar inside the live call.

Comcast India Engineering Centre | Software Development Engineer Intern Chennai, India · May 2025 - Aug 2025

- Tasked with testing whether low-code agent tooling could work in engineering teams; scoped the problem, chose Langflow and shipped a pilot that unified planning, budget tracking, data storage, team communication and code generation in one interface.
- Cut ~40% of recurring planning and coordination work for a 40-person engineering team by driving adoption, then iterated on real usage with RAG over internal documentation, improving team communication efficiency a further ~18%.

PROJECTS & RESEARCH

PrismAI | Approval-First AI Meeting Agent for Agencies Mar 2026 - Present

- Shipped the beta (0 to 1) in 6 months to 14 users across isolated multi-tenant workspaces, 100+ meetings analyzed: Recall.ai bots join Zoom, Meet and Teams calls, and 12 LangGraph agents turn each call into decisions, action items, emails and Jira/Linear tasks.
- Engineered hybrid RAG over transcripts and PDF/Notion/Drive documents (pgvector + BM25 with reciprocal-rank fusion, query rewriting, LLM reranking) and an MCP connector that puts meeting data inside Claude and ChatGPT.
- Now building the agency release (Dec 2026 launch): flags out-of-scope client requests with the contract clause quoted and drafts a change order priced from the agency's rate card. Code computes every dollar; nothing is sent until the owner approves.

BetterBill | AI Billing Advocate for Hospital Bills Oct 2026

1st Place, Visa Track & 1st Place, Photon: Best Voice Agent | AI Hackathon 2026 by LA Hacks, UCLA (24-hour hackathon)

- Built the bill-intelligence core on a 4-person team: a deterministic TypeScript rules engine that computes every flag and dollar in integer cents while the model only transcribes, plus the photo and text bill readers, the API and the Postgres schema.
- Rules engine caught 22 of 22 seeded billing errors across 11 synthetic bills with 0 false flags on 3 clean bills; the photo reader reached 88.8% line recall on 35 phone photos. Added Sentry monitoring on every AI call and a shareable evidence packet.

Terrametric | Crop Drought Stress Intelligence Platform Apr 2026

1st Place, Real World Track (Ambrook) & Data Science Track; 3rd Place, Open Source | Bitcamp 2026, UMD (36-hour hackathon)

- Came up with the idea and shipped it in 36 hours on a 3-person team: a field-level platform that scores drought risk, prescribes irrigation with cost and savings projections, and texts alerts to farmers without a dashboard. Led the live pitch to the judges.
- Owned orchestration, the stress metrics, model training for a 14-day per-field XGBoost forecast, and a RAG chat (Qwen 2.5-7B) grounded in Iowa/USDA agronomy documents.

FireSight | Cited Arrival Briefs for Fire Officers Oct 2026

1st Place, Track 1: Hacking with Public Data APIs | super{set} SF (1-day hackathon)

- Built the spoken brief (ElevenLabs), Android AR view, AI layer and MCP server on a 4-person team: a dispatch line opens the 3D building at the fire floor, briefed from 88 San Francisco public data sources.
- Brief built by rules, not a model: a validator drops uncited lines, and conflicting records are shown side by side.

Tool-Guided Retrieval-Augmented Repair for Securing LLM-Generated C Code Sep 2025 - Jul 2026

First author, arXiv:2607.21641 | 2nd Place, Engineering, Penn State Undergraduate Exhibition 2026

- Built a repair pipeline for LLM-generated C that feeds GCC and CodeQL diagnostics into an iterative loop guided by retrieval over a self-growing repository of past repair outcomes, with KLEE symbolic execution as final validation.
- Across 5,000 C programming tasks, cut DeepSeek Coder 1.3B compilation failures from 42% to 22% and security defects from 35% to 15%, and cut CodeLlama 7B total CodeQL errors from 15,088 to 2,463 (83.7%).

EDUCATION

The Pennsylvania State University University Park, PA · Aug 2023 - Dec 2026

B.S. Computer Science, Minor in Mathematics | GPA 3.84 / 4.00 · Dean's List, 6 of 6 semesters

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, Java, C, C++, SQL
AI Systems: LangGraph, RAG (pgvector, BM25/RRF), MCP, tool calling, LLM evals, voice agents, OpenAI, Anthropic & Gemini APIs
Backend & Infra: FastAPI, oRPC, PostgreSQL (row-level security), Drizzle ORM, Supabase, Temporal, SSE, WebSockets, Docker
Frontend & Integrations: React, Next.js, Tailwind CSS, Chrome extensions, Recall.ai, Slack, Notion, Jira, Linear, Twilio
Testing & Security: pytest, Playwright, Zod, CI security gates, Sentry, Git, Vercel, GitHub CodeQL, KLEE symbolic execution
