Software Engineer | Forward Deployed & Applied AI

EXPERIENCE

Sherlock AI — Software Engineering Intern Jun 2026 – Aug 2026

Remote

- Owned the public demo interview flow end-to-end in Next.js, covering adaptive interview behavior, in-browser recording, and submission. This is the surface prospective customers evaluate before they talk to the team.
- Prototyped a Google Meet add-on that renders audit logs and validates interview integrity from a sidebar inside a live call, so review happens where the interview already takes place.

Comcast India Engineering Centre — Software Development Engineer Intern May 2025 – Aug 2025

Chennai, India

- Asked to determine whether low-code agent tooling could work inside engineering teams, scoped the problem, selected Langflow, and shipped the pilot: one interface for event and project planning, budget tracking, structured data storage, and team communication, plus a code-input surface returning generated solutions.
- Drove adoption across a 40-person engineering team, cutting ~40% of their recurring planning and coordination work, then iterated on real usage by adding RAG over internal documentation, improving team communication efficiency a further ~18%.

The Pennsylvania State University — Learning Assistant & Math Peer Tutor Aug 2025 – Present

Learning Assistant, Aug 2025 – May 2026 · Math Peer Tutor, Jan 2026 – Present | University Park, PA

- Teach technical concepts to non-specialists through calculus review sessions and one-on-one tutoring across introductory mathematics.

PROJECTS & RESEARCH

PrismAI — AI Meeting Intelligence Platform Mar 2026 – Present

- Built (0→1) a meeting intelligence platform where Recall.ai bots join Zoom, Meet, and Teams calls and a 12-agent LangGraph pipeline turns conversations into decisions, action items, emails, and Jira/Linear tasks; added real-time voice interaction and an AI stand-in for absent teammates.
- Engineered a workspace-shared hybrid RAG layer over transcripts and PDF/Notion/Drive documents (pgvector + BM25 with reciprocal-rank fusion, query rewriting, LLM reranking), plus an MCP connector exposing meeting data inside Claude and ChatGPT.
- Deployed in 5 months to a live cohort of 14 users across isolated multi-tenant workspaces, with 100+ meetings analyzed. Stack: React, FastAPI, LangGraph, Claude/OpenAI, Supabase/pgvector.

Terrametric — Crop Drought Stress Intelligence Platform Apr 2026

1st Place, Real World Track (Ambrook) & Data Science Track; 3rd Place, Open Source — BitCamp 2026, UMD (36-hour hackathon)

- Built and shipped a field-level crop stress platform in 36 hours that scores drought risk, generates irrigation prescriptions with cost and savings projections, and lets farmers simulate decisions before committing.
- Grounded it in domain sources with a RAG agent (Qwen 2.5-7B) over Iowa/USDA agronomy documents, a 14-day per-field forecast on an XGBoost pipeline, and Twilio SMS alerts to reach users without a dashboard.

Tool-Guided Retrieval-Augmented Repair for Securing LLM-Generated C Code Sep 2025 – Jul 2026

2nd Place, Engineering — Penn State Undergraduate Exhibition for Research, Inquiry & Creative Activity 2026 | arXiv:2607.21641

- Built a tool-guided repair pipeline for LLM-generated C pairing GCC and CodeQL diagnostics in an iterative loop driven by retrieval over a self-growing repository of prior repair outcomes, with KLEE symbolic execution as final validation.
- Across 5,000 C programming tasks, cut DeepSeek Coder 1.3B compilation failures from 42% to 22% and security defects from 35% to 15%, and reduced CodeLlama 7B total CodeQL errors from 15,088 to 2,463 (83.7%).

EDUCATION

The Pennsylvania State University Aug 2023 – Dec 2026

B.S. Computer Science, Minor in Mathematics | University Park, PA

GPA 3.84 / 4.00 · Dean's List, 6 of 6 semesters

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, Java, C, C++, SQL
Backend & Data: FastAPI, PostgreSQL, Supabase, REST APIs, SSE, WebSockets, Docker, Git, multi-tenant isolation
AI Systems: LangGraph, RAG, pgvector, BM25/RRF, MCP, tool calling, OpenAI API, Anthropic API, XGBoost
Frontend & Integrations: React, Next.js, Tailwind CSS, Recall.ai, Slack, Notion, Jira, Linear, Twilio
Security & Program Analysis: GitHub CodeQL, KLEE, GCC
